Portfolio

Mathematician and software engineer with 7 years at a GLI-certified charitable gaming startup, wearing whatever hat the company needed as it grew from 7 to 30 people. Built and led the internal pull-tab math model pipeline that produced thousands of compliant models across hundreds of games and multiple jurisdictions. Experienced across the full model lifecycle, from prize structure design and distribution modeling to regulatory submission and delivery to game development teams.

EDUCATION

Central Michigan University, Mt. Pleasant, MI
Bachelor of Science in Computer Science

EMPLOYMENT HISTORY

Pilot Games, Mt. Pleasant / Birmingham, MI

Mathematician August 2022 - September 2025

- Led development of a Python tool that converted Excel game outcome data into JSON math models ready for server deployment, producing thousands of models across hundreds of games spanning multiple denominations, prize distributions, and jurisdictions.
- Extended the math generation tooling to extract prize distributions and free-play bonus data from existing templates, salvaging a stalled game release after a failed partnership. The recovered game became the most popular title for a month after launch.
- Led math model deliverable production for an external partner porting their game catalog to Pilot Games' platform, implementing prize distributions and bonus gameplay data to exact partner specifications. Ported titles were among the most popular on release.
- Created UML diagrams of the full math model architecture, onboarded every developer who contributed to the tooling, and served as primary point of accountability for all math deliverables to stakeholders.

Software Engineer August 2018 - August 2022

- Primary maintainer of a Unity/C# broadcasting tool used in live bingo tournaments across roughly 10,000 bars in Minnesota daily. Owned the repository, code reviews, and all production deployments.
- Built a LAMP stack order management system from scratch that processed 10,000+ orders and coordinated field replacement of 18,000+ devices, serving 40+ internal users.

Technical Project Manager May 2019 - June 2023

- Managed a company-wide hardware refresh replacing approximately 12,000 iPads across the field fleet before a regulatory compliance deadline, deploying multi-device provisioning stations capable of synchronizing 16 units simultaneously.

TECHNICAL SKILLS

Math & Modeling: Paytable Design, Game Volatility Analysis, Scenario File Generation, Payout Distribution Modeling, Regulatory Compliance, Algorithms, Game Design Documentation

Languages & Data: Python, C#, JSON, SQL, JavaScript, PHP, Microsoft Excel

Platforms & Tools: Git, Unity, Linux, MySQL, Django, LAMP Stack, GitHub Actions, Photoshop, Illustrator
